

## Technical Consulting/ Root Cause Analysis

The impressive growth of the wind energy sector over the last decades has not only led to an increase in wind turbine size but also to new turbine concepts and more complex design in general. Due to shorter design cycles and smaller safety factors more technical issues occur during operation.

BerlinWind offers independent expertise and root cause analysis. We have excellent knowledge of all types of wind turbines especially in the areas of rotor dynamics and structure mechanics.

The staff of BerlinWind has been involved in many projects helping our clients to find causes as well as sustainable solutions for technical problems.

### Your benefit

BerlinWind consults you with well directed troubleshooting on problematic turbines as well as on the optimisation and technical improvement of wind turbines.
